

## INSTALL JUMPERS TO ENABLE DESIRED SIGNALS

### NOTES:

Do not install J1 (DB-9) if you intend to mount a controller to the card. Only install J1 if you intend to run an external controller from this jack.

You must install jumpers to enable J1. Use 22 AWG hookup wire to connect the signals as desired for your intended use.

The signals required for a repeater are noted on this drawing and wired for convenient access. All other signals are brought out to a test point for user access. Consult the GE-MASTR II Station Manual to identify these signals.

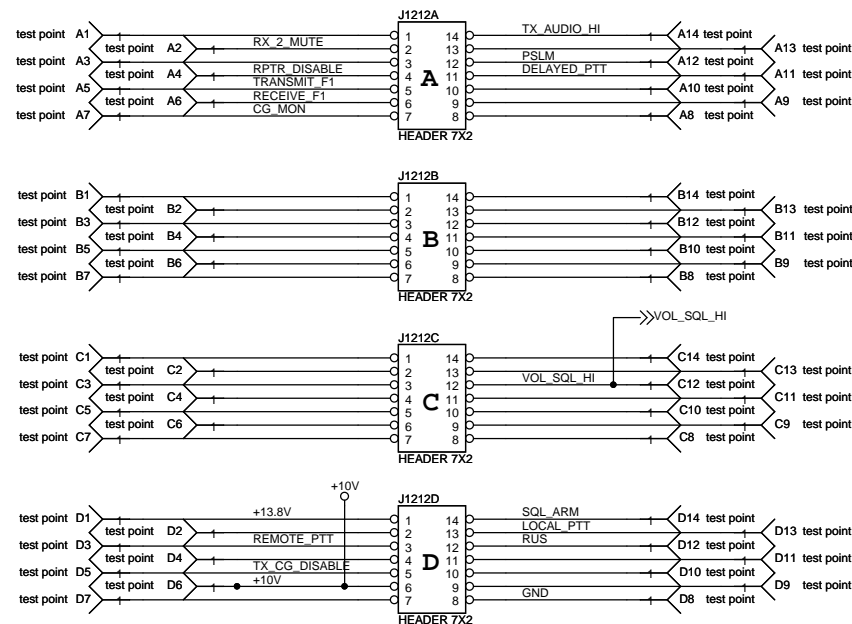

Insert card into far right hand "AUX CONTROL" slot J1212 for repeater control applications.

If the optional hi-pass CTCSS filter is required, the parts will require installation on the board. Please refer to the parts list shown on page 2 for part details. If the CTCSS filter is not required, then a jumper must be installed across the "OUT" holes of JP10 in order for audio to pass. The required parts are not supplied by NHRC.

Holes in a grid pattern are provided as a customer convenience.

Cards that have been soldered to are not returnable.

## CARD EDGE FINGERS

Consult the GE MASTR-II  
Station Manual for signals not  
listed.

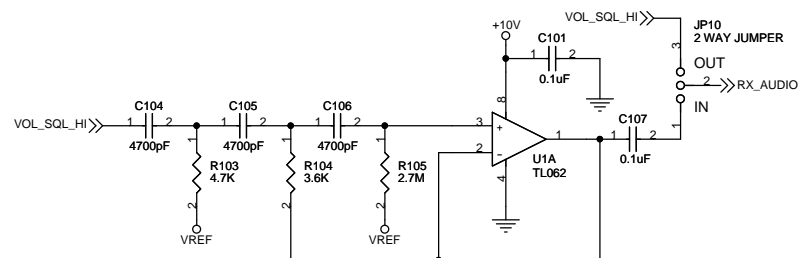

**PLEASE READ ALL NOTES  
BEFORE BUILDING OR  
USING THIS KIT.**
